Summary

.NET Full Stack Developer with 2+ years of experience in C#, ASP.NET MVC, .NET Core, SQL Server, AngularJS, React.js, and REST APIs. Proficient in microservices, API integration, database optimization, and cloud deployment using AWS. Skilled in developing scalable applications and AI web solutions using OpenAI APIs LLMs, and RAG pipelines.

Education

Birla Institute of Technology, Mesra, Ranchi, India — **2021 – 2025**
BTech in Computer Science and Engineering — **CGPA: 8.1**
Class 12 (PCM) – SD ACAD, **92.6%** — **May 2020**
Class 10 – GD DAV Public School, **96.8%** — **May 2018**

Skills

- **Languages:** *C#, SQL, Python, C, C++, JavaScript, TypeScript, HTML5, CSS3, jQuery*
- **Frontend:** *AngularJS, React.js, Redux, Bootstrap, Leaflet.js*
- **Backend:** *ASP.NET MVC, .NET Core, REST APIs, Web API, Entity Framework, ADO.NET, Dapper, LINQ, FastAPI, Node.js*
- **Cloud & Serverless:** *AWS (EC2, S3, EKS, Lambda, IAM, Secrets Manager), Azure*
- **Messaging & Caching:** *Apache Kafka, RabbitMQ, Redis*
- **DevOps, Containers & Tools:** *Docker, Kubernetes, CI/CD Pipelines (GitHub Actions / Jenkins), Git, Bitbucket, Postman, JIRA, Visual Studio, VS Code*
- **Databases:** *SQL Server, PostgreSQL, MongoDB, Stored Procedures, Views, Triggers, SSMS*
- **AI/ML & Tools:** *Machine Learning, Deep Learning, Computer Vision, CNN, ResNet50, OpenCV, TensorFlow, Scikit*
- **Auth, Security & Practices:** *OAuth2, JWT, RBAC, API Security, Cloud Security, Agile / Scrum Methodologies*

Experience

.NET Full Stack Developer (Manager) — **Jun 2025 – Present**
Bandhan Bank — *India*

- **Microservice Platform:** Engineered 12+ ETB/NTB reporting microservices on the NEEV platform using ASP.NET MVC, C#, AngularJS, React.js, Redux, and SQL Server, supporting 500+ branches and improving efficiency by **35%**.
- **Role-Based Dashboards:** Designed interactive, role-based dashboards for **1,200+ Branch Heads and Cluster Heads** using React.js, Redux, AngularJS, and jQuery to monitor over **100K** customer accounts and real-time leads.
- **API Integration:** Integrated Bureau Trigger APIs with TransUnion and NEEV LMS using RESTful Web APIs, Entity Framework, ADO.NET, and Dapper, automating lead generation and reducing manual effort by **80%**.
- **Lead Processing, CI/CD Pipelines & DevOps:** Streamlined event-driven CIF/MRN lead pipelines via C#, LINQ, Node.js, and Python for **10K+** monthly events (**99.9%** uptime), while orchestrating Docker, AWS EKS (Kubernetes), Bitbucket, and GitHub Actions / Jenkins CI/CD to cut release cycles by **50%** with zero downtime.
- **Authentication & SSO:** Implemented JWT and OAuth2-based authentication with RBAC across all core dashboards, securing session access for **100K+** customer records and preventing unauthorized breaches.
- **Database Design:** Architected relational SQL Server, PostgreSQL, and MongoDB schemas; optimized **50+** complex stored procedures, views, and triggers in SSMS, reducing query execution times by **40%**.
- **Messaging & Caching:** Configured asynchronous messaging pipelines using Apache Kafka and RabbitMQ with Redis caching, supporting **10,000+** daily concurrent requests with **sub-100ms** API response times across **500+** branches.
- **Cloud Architecture & Security:** Deployed AWS (EC2, S3, EKS) and Azure microservices with **15+** AWS Lambdas (saving **25%** compute costs), while enforcing **20+** AWS IAM policies and Secrets Manager for **100%** secret remediation.
- **Testing & Collaboration:** Authored **150+** unit test suites and automated Postman API test collections, maintaining **85%+** code coverage and tracking bi-weekly sprint deliverables in JIRA via Agile / Scrum.

Projects

GAIA (Governance Assistant for Intelligent Climate Action) — **Live Demo**

- **Climate Planning Platform:** Built an AI-powered climate planning platform using React.js, FastAPI, Python, PostgreSQL, Leaflet.js, and OpenAI LLMs, integrating **5+** climate and geospatial data layers.
- **Geospatial Dashboards:** Delivered interactive geospatial dashboards for visualizing urban heat hotspots, climate risks, and environmental indicators across **1000+** mapped locations.
- **Simulation Models:** Implemented simulation models for tree plantation, cool roofs, rooftop greening, and green space expansion, enabling evaluation of **4** sustainability interventions before deployment.
- **AI Governance Assistant:** Developed an Agentic AI assistant using LangChain, LangGraph, and RAG pipelines to autonomously retrieve geospatial insights and generate climate policies, cutting manual analysis effort by **60%**.
